Use-Case Flow: Submit Timesheet

Problem Statement #46 – Remote Team Time-Tracking & Project Approver

Primary Actor

Remote Developer

Supporting Actor: Engineering Manager

Preconditions

1. The developer is authenticated and has an active account on the platform.
2. The developer has logged the required time entries for each day of the reporting week.
3. The timesheet for the reporting week has not already been submitted or approved.

Postconditions

On success:

- The timesheet status changes to Pending Approval.
- The timesheet entries are locked from further editing.
- The Engineering Manager is notified of the submitted timesheet.

On failure:

- The timesheet remains in Draft status.
- No notification is sent to the Engineering Manager.
- The developer can correct the invalid entries and resubmit.

Main Success Scenario

1. The developer selects Submit Timesheet for the reporting week from the dashboard.
2. The system retrieves all time entries logged for the selected reporting week.
3. The system performs UC-05 Validate Timesheet (included use case) and checks that:
 - no single day exceeds 24 hours,
 - every entry references a valid Jira ticket, and
 - the required daily entries for the reporting week are present.
4. The system confirms that all entries pass validation.
5. The system changes the timesheet status to Pending Approval and prevents further edits to its entries.
6. The system notifies the assigned Engineering Manager that the timesheet is awaiting review.
7. The system displays a confirmation message to the developer showing the submitted date range and total hours.
8. The use case ends successfully.

Alternate Flow – 3a. Validation Fails

- 3a1. The system detects a validation problem, such as a day exceeding 24 hours, an entry without a valid Jira ticket, or a missing required daily entry.
- 3a2. The system rejects the submission, keeps the timesheet in Draft status, and identifies the entry or entries causing the validation failure.
- 3a3. The system displays an error message describing what must be corrected.
- 3a4. The developer corrects the flagged entries and retries the submission from Step 1.
- 3a5. If the developer does not correct the identified problems, the timesheet remains in Draft status and no notification is sent to the Engineering Manager.
